

AUTOMATED INVENTORY MANAGEMENT

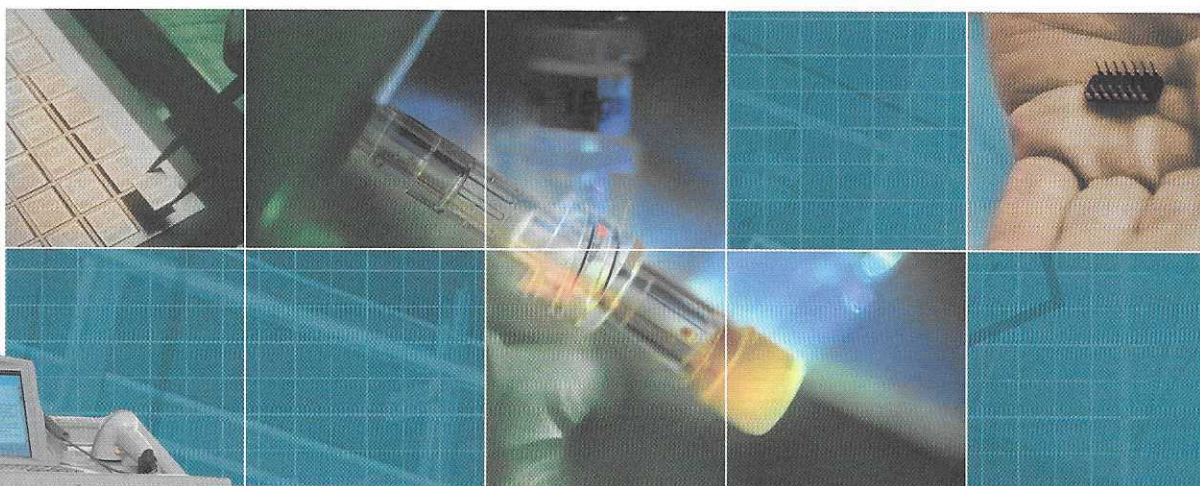

POINT-OF-USE DISPENSING

ELECTRONIC REORDERING

Programmable

single-item dispensing

A tailored solution

Introducing CUBIE™ single-item dispensing units. The CUBIE™ Smart Pocket technology provides Vistant's highest level of security for storing and dispensing critical supplies or small, expensive parts.

CUBIE units are flexible, portable and programmable, providing centralized control for a decentralized process. This system increases restocking efficiency at the point-of-use, so you can improve security and logistics while reducing MRO and direct material packaging costs. The reusable CUBIE units are easily configured and can be loaded quickly into other Vistant SafeStock™ units.

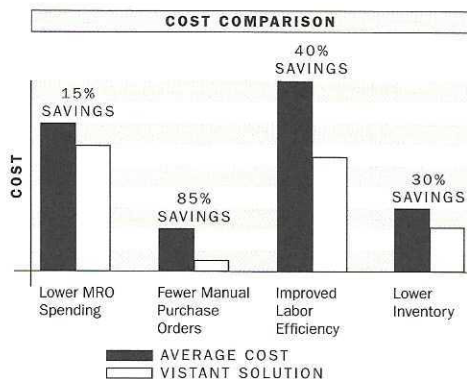

Resourceful distribution

- CUBIE provides a critical link in the materials management process: logistics
- Portability allows CUBIEs to be batch-filled—efficiently and accurately
- CUBIEs can be shipped across the country or the world—they're tamper-evident, trackable and only accessible by an authorized person using a docking bay
- CUBIE offers more line-item capacity and additional control compared to other drawer types
- Perpetual inventory monitoring: When balances fall below stated reorder points, SafeStock will electronically reorder items using either XML or EDI formats. You also have the option of e-mailing, printing or faxing order reports

CUBIE™

- CUBIE™ automatically communicates with SafeStock™, streamlining the replenishment process
- The CUBIE embedded electronic memory chip remembers the identity, quantity and lot number of the materials stored inside
- Simple programming options help prevent the distribution of expired items
- Vistant software can be configured to interface with most major ERP or MRP software systems, including Oracle, SAP and PeopleSoft

(Estimate based on composite Needs Analyses for Fortune 500 firms)
